Zombie Wildfires

Lindsey Anderson 11th grade

In the Arctic Circle, there are wildfires that burn throughout the summer season, but once winter comes around, they lay dormant. However, once the next summer comes, they “rise from the dead”. These are known as zombie wildfires. Because they never really die and they always come back. Despite the extremely cold climate in the Arctic Circle, these fires never go out. They keep smoldering all winter long. The lowest temperatures recorded in the Arctic Circle range from -79.6 to -92.2 degrees Fahrenheit. According to an article on Science.org “In addition to changing ecosystems within the scorched perimeter, these so-called Arctic zombie wildfires amplify climate warming by releasing carbon from soil and affect human health around the planet by releasing particulates into the air”. These wildfires, when combined with other natural hazards, can create a domino effect that has the potential to cause a lot of harm to the environment and the people in the area.

Tractors

Michael David Egeland 11th

Tractors are an essential part of modern agriculture and have revolutionized the way we cultivate crops. They are powerful machines that are designed to pull heavy loads and perform a variety of tasks on the farm. Tractors are used for plowing, planting, harvesting and many other tasks that are essential to agriculture. The first tractors were steam - powered and were used in the late 19th century. These early machines were large and

cumbersome and required a lot of maintenance. Over time, tractors have become more efficient and easier to use. Today tractors are powered by gasoline, diesel, or electricity and are much more reliable than their early counterparts.

Sport Update

Trap Meet results from Wednesday, May 17th - Molly L. 1st place female JV, Derrik K 3rd place male JV out of 88 students. Bradyn K. made 44/50 shots and Dylan K. 42/50. Good Job!

Kids Thoughts Week 35

What's your favorite Hobby?

Lexie – Sports

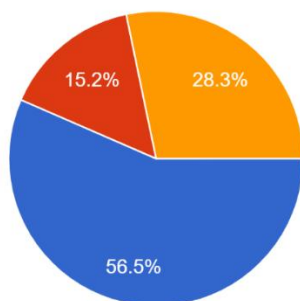

Jarrood – Basketball

Ava - Trombone
