Facts About Green Anaconda Snake
Emma S. 11th Grade

Green anaconda snakes are the heaviest snakes known for their vast size. Females are usually larger than male green anaconda snakes. These snakes can grow up to 30 feet long and 550 pounds. What do green anaconda snakes look like? Well, they are obviously green but there are some of them that have different patterns. Some are all dark olive green colored and then there are other ones that are olive green colored with black spots. There are two different kinds of green anaconda snakes which were recently discovered in 2024. They are extremely similar, but the major differences are that their DNA is different, and they are located in two different places on Earth. The two different species are the northern and southern green anaconda snakes. They are not the best hunters, so they sit and wait for their prey. They try their best to ambush their prey and then use their strength to get them once their prey gets into or near the water. You might think...in water? Yes, in water. These snakes are both land and water animals. Though they cannot breathe underwater, their eyes and nostrils are located on the top of their head, so they are able to submerge most of the way underwater and be able to breathe along with being able to see. These snakes also can go a long time without eating. They have a very slow metabolism so they can go a long time without having to look for their next meal.

Macaroni Penguin Taylor P. Grade 9

The Macaroni Penguin is a species of penguin found in the sub-Antarctic and Antarctic regions. They get the name macaroni from their yellow crest that goes from their forehead and extends back over each of their large red eyes. Macaroni penguins can grow up to 70 cm long and can swim up to 14 mph. They have large red/pink bills that they use to eat mainly krill and small fish. They are the most numerous penguin species with an estimated population of 9-18 million. Despite their large population they are still considered vulnerable to threats like climate change and overfishing. They live in colonies, usually on rocky areas like beaches and cliffs above the ocean. Unlike other penguins, instead of waddling, macaroni penguins usually hop on both of their feet. They are also exceptional divers, diving up to 100 meters for two minutes or more to find food. During breeding season female penguins usually lay two eggs but they tend to kick out the first egg and focus on the second bigger egg. Both parents take turns incubating the egg for around 40 days. After the chick hatches male penguins stay with them while the female penguins go and find food. Later on, the chicks will join in a group while parents continue to feed them until they become independent. Their average lifespan is 10-20 years in the wild. They are also known for their loud calls and aggressive behavior. Often males fight each other over territory and mates.

What are the Most Popular Colors Worldwide? Ronin W Grade 9

Out of the main priority colors red, orange, yellow, green, blue, purple, pink, brown, black, white, and gray. The most popular and favored color overall is blue which doesn't surprise me because blue is considered to be a calm, and reliable color. You most likely would think the second most popular color would be red, right? Wrong. Surprisingly, it's actually green. That shocked me because I personally don't like green at all, so it's interesting to see how different my taste is compared to the worldwide average. After green comes purple, which makes sense since purple is often considered to be a creative color. Still, I wouldn't have guessed it would be ranked so close to green.

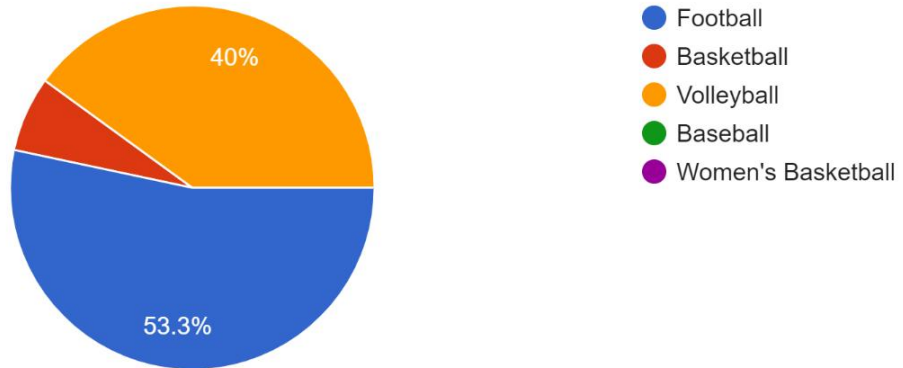

Following purple is red, which I expected to be higher, but it still makes sense for it to be in the top five. Then comes black. I don't have a problem with black it's versatile, but it feels a little too popular for such a plain color. After black comes orange, which used to be one of my favorite colors, so I'm not surprised it's still high on the list. Right after orange is yellow which is just a couple of points lower. Brown comes next, which is strange because I would never expect brown to beat out white yet alone to be on this list. After brown is white, which I think should rank closer to black because they're both strong pair colors. Finally, in last place is gray. These results may not make perfect sense to me, but they show how differently people view colors across the world.

Sports Update Kayelynn V. 9th

Last week on Friday September 19th our football team went over to Walker and lost 0-26, Monday September 22nd, our Junior Varsity volleyball team played Riverside Christian, winning in two sets 25-4 and 25-8. The Junior High 7th grade team also played and won in two sets too. On Tuesday September 23rd the Varsity and Junior Varsity went over to Bagley and played the Flyers, and our Junior Varsity put up a good fight but took their first loss, losing in two sets 14-25 and 24-26. Our Varsity team took home the win against the Flyers 24-19, 25-15, 23-25, and 25-23. On Thursday September 25th our volleyball team played Norman County East/Ulen in Climax JV won in straight sets 25-11, 25-18 and Varsity won 25-21, 25-11, 25-7. Junior high football 8th grade won 28-16
